

# Scheduled Assessments

---

Automate your compliance assessments by scheduling regular CIS Benchmark scans with custom timing and benchmark selections.

Learn more at [configcobra.com](https://configcobra.com)

## What is Scheduler?

The Scheduler allows you to schedule assessment runs **anyway you want**:  **daily**,  **weekly**,  **monthly**, etc. You can use  **rule sets** or you can select  **specific benchmarks**. You can use **multiple of these** to create different schedules for different compliance needs.

 **Use case:** Create a daily schedule for critical security controls using a custom rule set, and a monthly schedule for comprehensive CIS Benchmark Level 1 and Level 2 assessments. This ensures continuous monitoring while keeping comprehensive checks regular.

## How to Manage Schedules

Step 1:  Log in to ConfigCobra

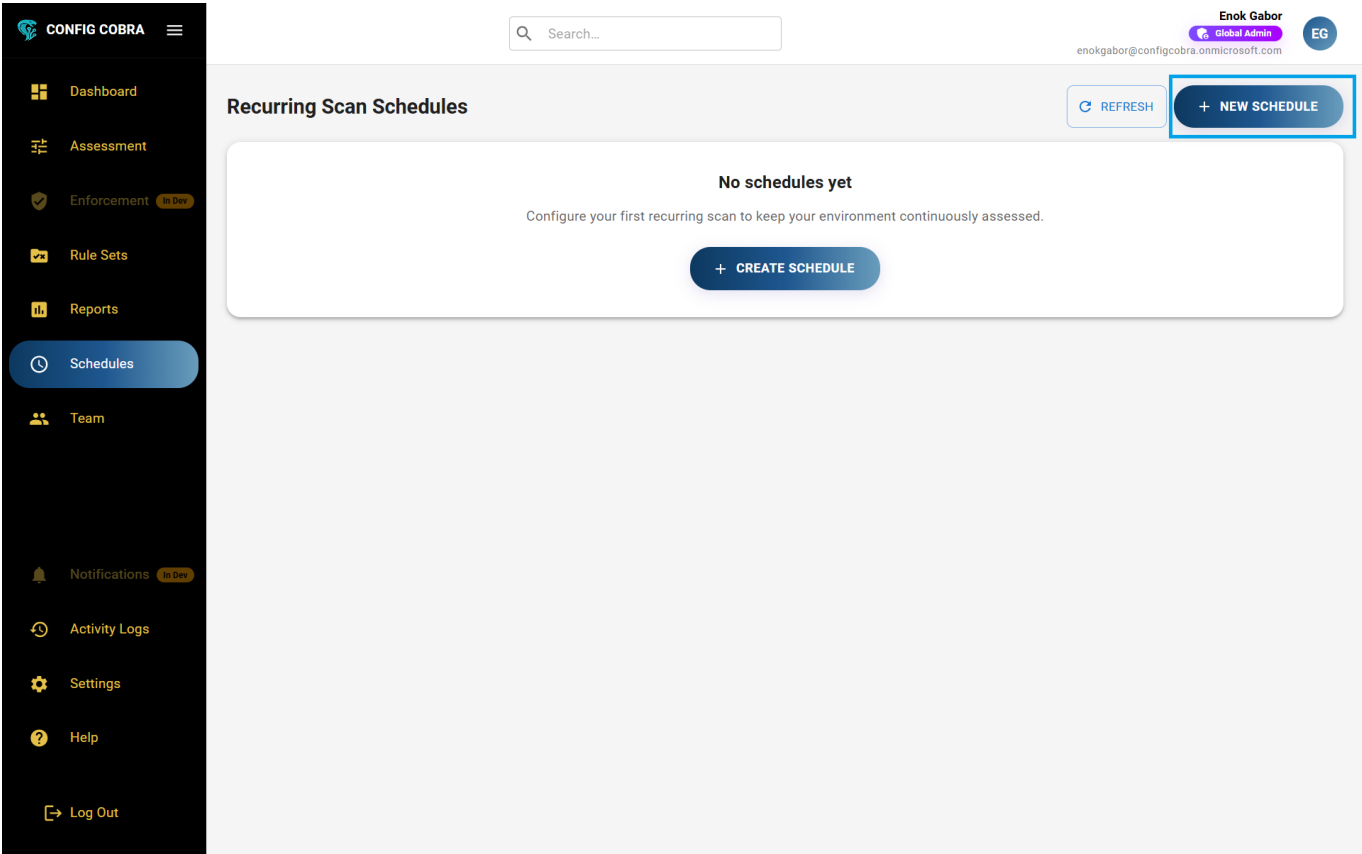

Log in at [app.configcobra.com](https://app.configcobra.com) using your credentials.

Step 2:  Navigate to Scheduler tab

Go to the **Scheduler** tab in the main navigation menu.

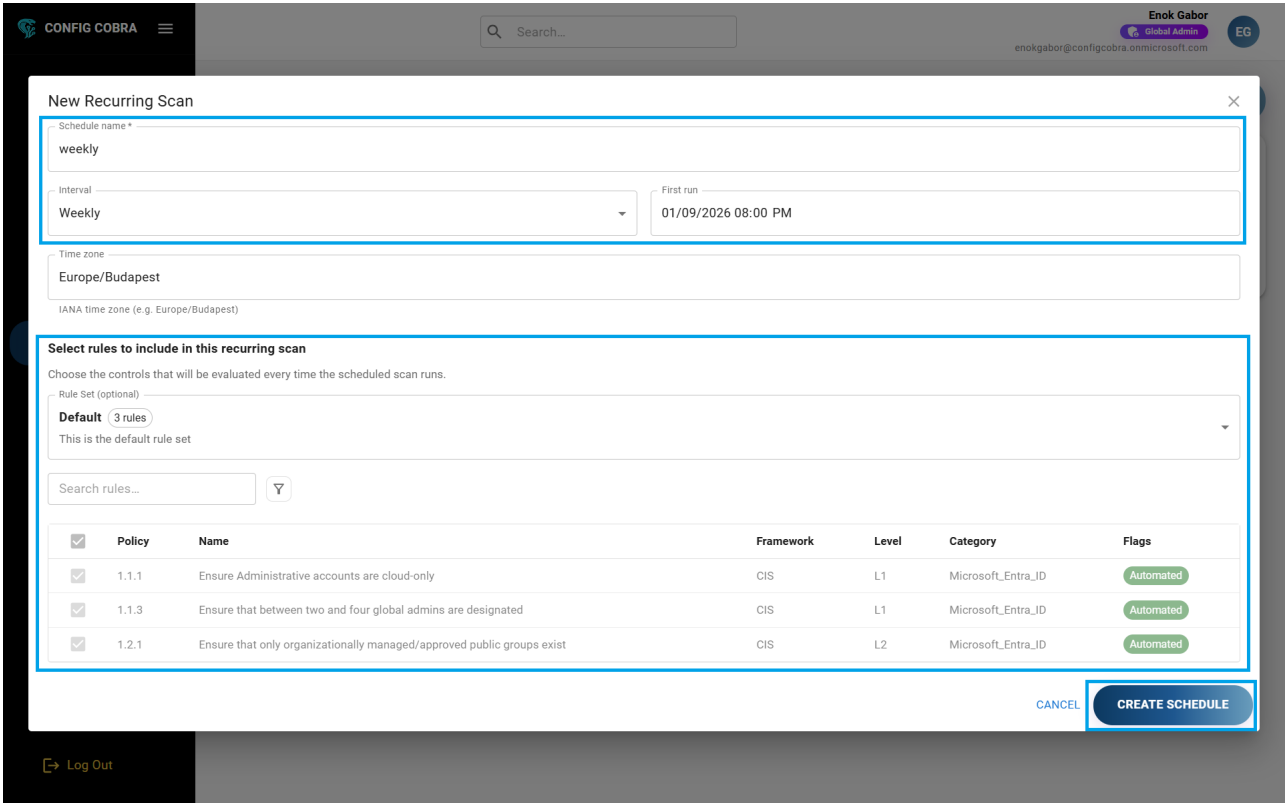

Step 3:  Create a new schedule

To create a new schedule, press "**Create New Schedule**" in the top right corner.

Then configure your schedule:

- 1. Add a **name** for your schedule
- 2. Select the desired **timeframes** (daily, weekly, monthly, or custom)
- 3. Choose either a **rule set** (learn more about [rule sets](#)) or a **custom selection** of specific benchmarks

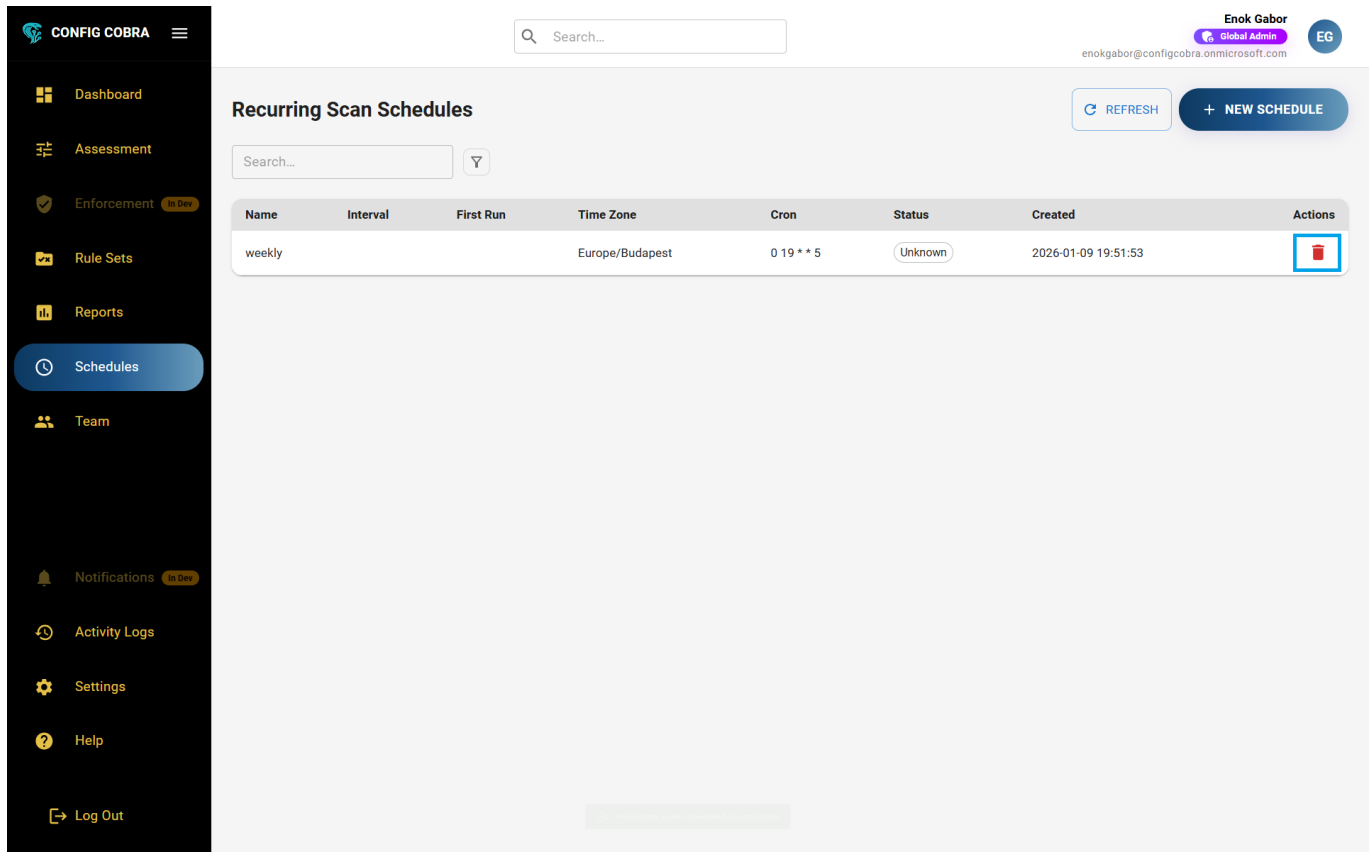

4. Press **"Create Schedule"** to activate it

## Step 4: Edit an existing schedule

To edit a schedule, press the **edit icon** on the right side of the desired schedule. You can update the name, timeframes, or change the rule set or benchmark selection.

## Step 5: Delete a schedule

To delete a schedule, press the **delete button** on the right of the desired schedule. This will stop all future automated runs for that schedule.

The screenshot shows the CONFIG COBRA web interface. On the left is a dark sidebar with navigation links: Dashboard, Assessment, Enforcement (In Dev), Rule Sets, Reports, Schedules (selected), Team, Notifications (In Dev), Activity Logs, Settings, Help, and Log Out. The main content area is titled "Recurring Scan Schedules" and includes a search bar, a "REFRESH" button, and a "+ NEW SCHEDULE" button. Below these is a table with the following data:

| Name   | Interval | First Run | Time Zone       | Cron       | Status  | Created             | Actions                                                                             |
|--------|----------|-----------|-----------------|------------|---------|---------------------|-------------------------------------------------------------------------------------|
| weekly |          |           | Europe/Budapest | 0 19 * * 5 | Unknown | 2026-01-09 19:51:53 |  |

## Step 6: Receive email notifications

After each scheduled assessment run ends, you will receive an **email notification** with the results. Learn more about [notifications](#) and how to configure your email preferences.

## Scheduling Options

### Daily

Run assessments every day at a specified time. Ideal for critical security controls that need continuous monitoring.

### Weekly

Schedule assessments to run once per week on a specific day. Perfect for regular compliance checks.

### Monthly

Automated assessments run once per month. Great for comprehensive compliance audits.

## Custom

Define your own schedule with specific dates and times. Use for unique compliance requirements or special audit periods.

## Best Practices

-  **Create separate schedules for different compliance requirements** (e.g., daily for critical controls, monthly for full assessments)
-  **Use rule sets** to ensure consistent assessment coverage across scheduled runs
-  **Schedule assessments during off-peak hours** to minimize impact on system performance
-  **Review scheduled assessment results regularly** and adjust schedules as needed
-  **Set up multiple schedules** with different benchmark selections for comprehensive coverage

## Use Cases

### Continuous Monitoring

Set up daily schedules for critical security controls to ensure continuous monitoring and quick detection of configuration drift.

### Regular Compliance Checks

Schedule weekly assessments for standard compliance requirements to maintain regular oversight.

### Comprehensive Audits

Create monthly schedules for full CIS Benchmark Level 1 and Level 2 assessments to ensure comprehensive coverage.

### Multi-Standard Compliance

Set up separate schedules for different compliance frameworks (SOC 2, ISO 27001, etc.) using custom rule sets. See [Compliance Mapping](#) for detailed mapping information.

## Tips

-  Start with weekly schedules and adjust based on your needs
-  Use rule sets in schedules for consistent coverage
-  Monitor email notifications to stay informed about results
-  Review and adjust schedules quarterly to ensure they meet your compliance needs
